

1. Take a square of paper. Place it as a diamond on your table, with the patterned side down.

Fold the diamond along an imaginary line down the centre (as pictured).

2. With the back side of the paper still on top, fold over the top flap to meet the centre fold (as pictured)

3. Turn your folded piece over

4. Now fold the folded piece of paper in half along the centre, putting tip to tip.

5. Turn the “star” over so that it looks like this:

6. Now we make a squash fold. Gently pry open the top flap and press it down so that the top vertical edge line-up back on the left side.

Now you have the first piece done.

The next one is easier!

7. Take another piece of origami paper, and place it like a diamond. Turn it so that the underside is facing upwards to you on the table, and fold it in half along the imaginary horizontal line.

8. Now fold it in half again, this time on the vertical axis. That's it for the second piece of paper.

9. Now we need to put them together. Take sheet one, and place it with the long point pointing down (or towards you). Take the second piece and slip it up and under so that its point slips into the internal pointy place under the flaps. Now apply some glue – just a little bit to hold the pieces in place, and hey presto, you have a five-pointed star.

You can make many more now!
